# TOWER QUICKSTART

## Realize faster time to value with the Tower Quickstart implementation

The Tower industry is shifting faster than ever to keep up with demand for network infrastructure to support 5G, and your business needs to keep pace.

Deployment operations management software helps you efficiently manage distributed tower projects, sites, and assets at scale. With Sitracker's Tower Quickstart implementation, you can realize technology-driven efficiencies and new ways of working faster than ever before with a standard set of proven Sitracker workflows for towercos.

## Control your tower portfolio and drive growth

To meet market demands faster, Sitracker helps bring your business processes and teams together with deployment operations management cloud software.

One of the benefits of running your deployment operations in the cloud is standardizing on proven best practices for towercos. Sitracker's Tower Quickstart implementation package helps you get up and running in as little as eight weeks so you can manage the entire tower lifecycle quickly and recognize the value of your new solution.

With Sitracker Tower Quickstart you will:

**Automate based on best practice** using pre-built, intelligent templates and workflows.

**Grow revenue quickly** by optimizing collocation, site development, and tenant applications with connected tools like public maps, forms, and pricing.

**Make high quality decisions and forecasts** with powerful tower dashboards, reports, and analytics

**Easily manage portfolio details** from leases and CAD drawings to photos and installed equipment.

# The Sitetracker Telecom for Tower Quickstart package can include:

- ✔ Best practice configurations for:
  - Site Acquisition
  - Site Leases
  - Site Development
  - Site Inquiry
